ALEA Instructions for Local Data Managers

| | | | |
|-----|------------------------|-----------------|---|
| ID: | HDC-OP-CDM-342-2-MN- 2 | KMS Version: | 3 |
|-----|------------------------|-----------------|---|

1. PURPOSE

This document provides instructions, guidelines and background information regarding the Electronic Data Capture (EDC) system of ALEA (version 17.1) , as implemented by the Erasmus MC – HOVON Data Center.

2. SCOPE

This manual is applicable for Local Data Managers and for Site Principal Investigators.

3. TERMS & ABBREVIATIONS

| Term (Abbreviation <i>if applicable</i>) | Definition |
|---|---|
| CDM | Central Data Manager/ Central Data Management |
| CRF | Case Report Form |
| EDC | Electronic Data Capture |
| HCD | HOVON Data Center |
| LDM | Local Data Manager/ Local Data Management |
| LI | Local Investigator (new: Site PI (Site Principal Investigator)) |
| SDV | Source Data Verification |
| Site PI | Site Principal Investigator |

4. REQUIRED & RELATED DOCUMENTS

| # | Type | Document title |
|-----------|------|--|
| 06DEC2016 | | Data Management User Manual build 16.1 |
| 21DEC2017 | | ALEA 17.1 New Features |

5. DOCUMENT HISTORY

| Version | Date | Description of change |
|----------|-----------|--|
| V-schijf | 01DEC2014 | ALEA instructions for Local Data Managers (original version) |
| V-schijf | 24JUN2015 | Unknown (V-schijf version 2) |
| 2 | 22JAN2019 | Unknown (V-schijf version 3) |
| 3 | 13MRT2020 | Chapter 2: Change text to Local Data Management (LDM)/ Site Principal Investigator (Site PI) and added 'Screening database'. |
| | | Document: Change term Local Investigator (LI) to Site Principal Investigator (Site PI) in document |
| | | Chapter 2: Change sentence to 'The examples given in this manual may slightly differ in studies, due to study-design and eCRFs used' |
| | | Chapter 2.2: Change Picture Workflow and deleted information considering signing off. |
| | | Chapter 6: Delete sentence on Signing off by LI and delete sentence 'The icon  indicates..... (resolved) discrepancy' |
| | | Summary: Sentences changed in relation to signing. |

|-----|------------------------|-----------------|---|

2. ALEA

ALEA is supported by most commonly available web browsers (i.e. Internet Explorer 7.0 and higher, Mozilla FireFox, Google Chrome, Safari (Apple), and Android 4.0 and higher).

Used documentation: Forms Vision ALEA data management User Manual v.5.4.

Instructions are applicable to ALEA Data management version 17.1.

Manuals for ALEA are available for:

- Central Data Management (CDM)
- Central Laboratory (CLAB)
- Cytogeneticist/ Cytogenetic Review
- Local Data Management (LDM)/ Site PI (Site Principal Investigator)
- Pathology/ Pathology Review (PA)
- Patient registration on the site.
- Screening database.

This ALEA Manual is suitable for general HOVON studies. The examples given in this manual may slightly differ in studies, due to study-design and eCRFs used.

Specific directions for filling out the forms can be found in study specific instructions.

2.1 Data organization

The data are organized around Events and associated Forms (CRFs). Events can be considered as separate, consecutive phases during the conduct of the trial (e.g. Registration/ Randomisation, On Study, Treatment, Follow Up). Events include one or more different Forms (e.g. Lab Results, Treatment Details, Response Evaluation). An example of an Event and associated Forms:

| Event | Forms |
|-----------|---|
| Treatment | Treatment Details Lab Results Response Evaluation |

Some Forms are not linked to specific Events and defined as independent Events (e.g. Adverse Events, Concomitant Medication). Also, some forms that are filled out by for example central lab are in separate events.

2.2 Workflow

Data follows a certain workflow before it is ready for statistical analysis. Specific user roles (the Local Data management (LDM)/ Site PI (Site Principal Investigator), Central Data Management (CDM), the Cytogeneticist/ Cytogenetic Review are responsible for a certain stage of the workflow:

MANUAL

ALEA Instructions for Local Data Managers

| | | | |
|-----|------------------------|-----------------|---|
| ID: | HDC-OP-CDM-342-2-MN- 2 | KMS Version: | 3 |
|-----|------------------------|-----------------|---|

Saving

First the data are entered and saved by the LDM. Data can be saved at all times; it is not required to complete all fields in order to be able to save the Form. ALEA automatically saves every two minutes.

Submitting

The Submit button will be enabled when all data meet automated checks (e.g. boundary checks and inconsistency checks), all required fields are completed and all discrepancies are properly addressed. If data are modified afterwards, the status Submit is revoked, and the Form has to be submitted again (with reasons provided why data were changed).

Verifying

Once data are submitted the CDM reviews the provided information. Manual queries can be raised and the CDM can set the form to Verified. A Form can be verified, even if there are outstanding queries or discrepancies. This status indicates to the LDM that the CDM has reviewed the Form and that queries – if any - can be answered. Editing a verified Form will revoke the status Verified.

Locking

When there are no more open queries, the CDM can lock the Forms.
In addition CRF can be locked at the request of the site by means of an e-mail to the HOVON Data Center.

2.3 Request for account

Users who don't have access to ALEA studies initiated by the Erasmus MC – HOVON data center (HDC), can request for a *general* ALEA user account. ALEA accounts are created on the basis of personal e-mail accounts via a request form (Appendix A). A personal e-mail account can only be used for one role within ALEA, hence it requires several e-mail accounts for users with more than one role in ALEA.

Next, access to the *study specific* database will be granted to study personnel (i.e. the Local (sub)Investigator(s) and Local Data Manager(s)) by the Trial Manager of the study.

2.4 Login

The URL to the ALEA portal is: <https://aleaclinical.com/Hovon/DM/DELogin.aspx?>

It is recommended to bookmark this link in the Favorites section of your web browser.

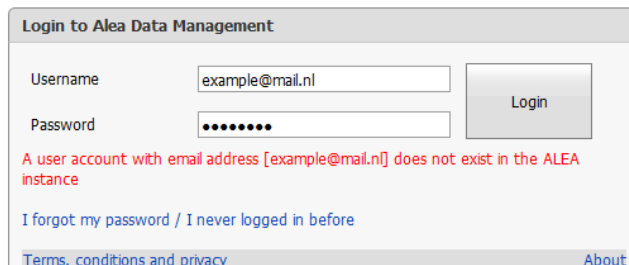

Logging in for the first time

Through the option “I forgot my password / I never logged in before” you can send a request to receive an email (from EMC TENALEA Mail Service info@formsvision.net) with a one-time link.

! **IMPORTANT:** For security reasons, this link expires within 30 minutes after receiving the email. Check your spam or junkmail folder if no email is received.

The following message may appear:

- No account has been provided yet, please contact the trial manager of the study
- The email address is incorrectly entered, →check the spelling

After logging in for the first time, using your email address as username, the following message appears:

3. Study Selection and organization

Study Selection

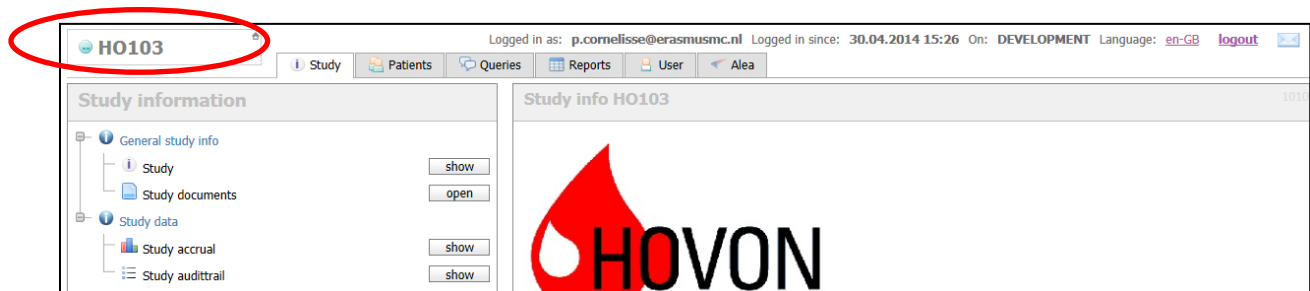

If you have access to multiple studies, you will enter a Study Selection page upon login. This split-screen shows an overview of all studies you have access to and a brief summary of the highlighted study.

You can mark your favorite studies by clicking the star in the upper right corner of the summary section or by clicking the star in the column (on the left of the enter button).

Open the study of choice either by clicking the Enter button of the highlighted study or the Enter button in the header of the summary section.

A study specific homepage appears, displaying the selected study on the study button in the upper left corner. To return to the Study Selection page, click this study button.

Organizing studies

Studies can be shown or hidden according to several criteria. Default all studies are displayed. By (un)selecting one or more criteria, ALEA shows the respective studies. For example, favorite studies can be displayed by clicking Marked.

|-----|------------------------|-----------------|---|

4. Study overview

A study homepage is organized according to the following tabs:

Please note that these tabs are only available if you are not working in a Patient Dossier (Chapter 5).

The Study tab shows the study details:

Here you can access study documents (if available, e.g. CRF instructions) or information on study accrual (with the option to adjust the chart settings).

5. Patients overview

By selecting the Patients tab from the study homepage, the eCRF can be accessed.

The default study overview appears.

The screenshot shows the 'Patients' tab interface. At the top, there's a toolbar with 'Layout', a refresh icon, and a plus icon. On the right, there are links for 'Recent patients' and 'Add new patient'. Below the toolbar is a header row with the instruction 'Drag a column header here to group by that column'. The main grid has columns: patient key, Institute, Clinician, Registration date, Last update, Dossier, #TF, #Sa, #L, and #TQ-O. Two patient records are visible, both from 'NL-Amsterdam-VUMC (VUMC)'.

| patient key | Institute | Clinician | Registration date | Last update | Dossier | #TF | #Sa | #L | #TQ-O |
|-------------|--------------------------|-----------|----------------------|----------------------|---------|-----|-----|----|-------|
| 001 | NL-Amsterdam-VUMC (VUMC) | | 02-Aug-2018 11:14:58 | 05-Oct-2018 10:54:35 | open | 10 | 8 | 0 | 0 |
| 002 | NL-Amsterdam-VUMC (VUMC) | | 04-Oct-2018 13:51:59 | 05-Oct-2018 10:54:54 | open | 1 | 0 | 0 | 0 |

In this Patient Grid you can easily sort by any given column by dragging the selected column header(s) to the upper bar (reading 'Drag a column header here to group by column'). For instance, it could be convenient to sort by 'Institute' if you perform the LDM for multiple sites. Alternatively the little arrows on the right side of the column could be useful for sorting on specific items.

If you drag columns back to the column header row of the grid, you undo the sorting.

It is possible to add more columns to the Patient overview. To do so, select the option 'Layout' → 'Customize layout':

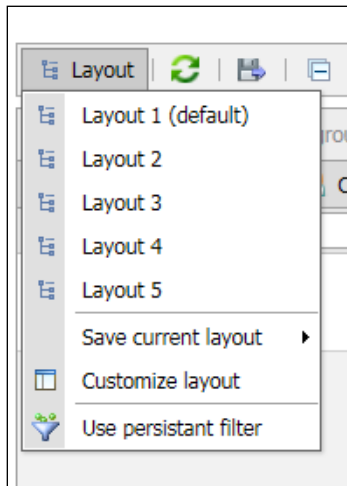

MANUAL

ALEA Instructions for Local Data Managers

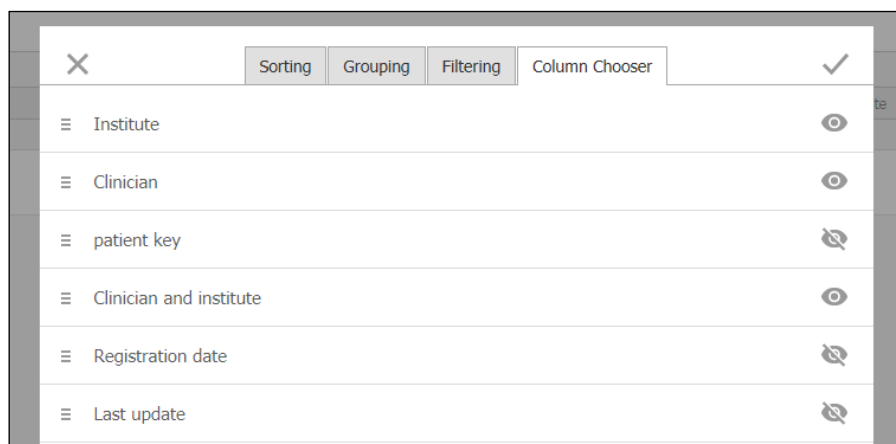

ID: HDC-OP-CDM-342-2-MN- 2

KMS
Version:

3

A Field Chooser is displayed with the tabs 'Sorting', 'Grouping', 'Filtering' and 'Column Chooser'.

By clicking/unclicking the preferred fields from the Column Chooser, followed by ✓ in the upper right corner the columns are added to your preferred settings.

For example, the following fields could be useful:

#TF: Total number of forms
#Sa: Number of saved forms

MANUAL

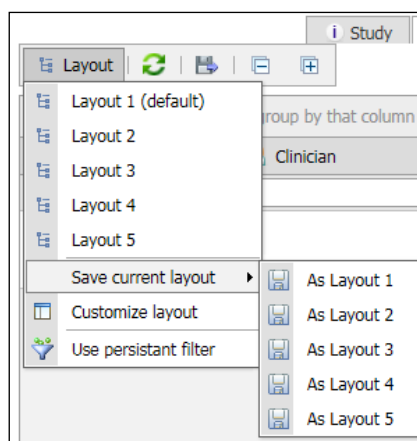

ALEA Instructions for Local Data Managers

| | | | |
|-----|------------------------|-----------------|---|
| ID: | HDC-OP-CDM-342-2-MN- 2 | KMS Version: | 3 |
|-----|------------------------|-----------------|---|

| | |
|--------|--|
| #S: | Number of submitted forms (without discrepancies and without missing values) |
| #Sd: | Number of submitted forms with discrepancies |
| #Sm: | Number of submitted forms with missing values |
| #V: | Number of verified Forms |
| #L: | Total number of locked forms |
| #TQ-O: | Number of open queries on Patients and Forms |
| #TQ-R: | Number of non-closed queries on Patients and Forms |

For a complete overview of all optional Fields, see appendix B

If you would like to save a certain layout (i.e. configuration of columns) in order to re-use it during subsequent sessions, click 'Layout' → 'Save current layout' → 'As layout X': If you choose for 'Layout1', the preferred layout will appear at the start of the next session

Patient summary

Clicking the icon  in a patient row will show the Patient Summary with the most important details (e.g. number of forms entered, number of open, replied and closed queries, whether or not SDV (Source Data Verification) was executed and number of annotations). Annotations can be used by every role to provide comments or extra information (see 7.4 for further information).

6. Patient dossier

To open a patient dossier, click the Open button in the row of the applicable patient.

Once you have opened a patient dossier, a Tree panel at the left side of the screen shows all the events. To expand all events, click on the plus sign at the bottom left of the Forms section. This will show all Forms and their statuses.

! **IMPORTANT:** It is strongly recommended to fill out the Forms in chronological order as depicted in the Tree panel. If filled out in a non-chronological order, unnecessary cross-form discrepancies might be triggered.

The (SDV= Source Data Verification) Legend link opens a pop-up screen that explains all statuses of completion (see Appendix C):

NB: The Patient and Form options buttons are not applicable for the LDM.

Please note the difference between Saved  and Submitted  statuses.

MANUAL

ALEA Instructions for Local Data Managers

ID: HDC-OP-CDM-342-2-MN- 2

KMS
Version:

3

If the pin at the top right corner of the Tree panel is pointed downwards , the Tree remains visible once opening a Form. Setting the pin in the horizontal position  by clicking on it, will hide the Tree panel once opening a Form. This allows for more space to display the middle and right panes.

Clicking on the icon  next to the Open button of a filled out Form opens a Form Summary. If the icon is red , there are open queries to be answered. If the icon is orange , this indicates that you have resolved discrepancies / queries that were not yet reviewed by the CDM.

MANUAL

ALEA Instructions for Local Data Managers

ID: HDC-OP-CDM-342-2-MN- 2

KMS
Version:

3

7. Entering and editing data

To enter or edit data on a Form, click the Open button:

Depending on the position of the pin in the Tree panel (see chapter 5), the screen will be divided in 2 or 3 sections. You can change the width of each section by moving the slide-bar to the left or to the right, or expand / collapse screens by clicking on the little arrows.

7.1 Conditional items

Some items are conditionally hidden and will only appear depending on answers to previous questions (e.g. if 'other, specify' is selected, a specification box will appear).

7.2 Repeated groups

Some (sections on) CRF's are arranged in groups, meaning that multiple similar entries can be added according to need. For example, on the Adverse Events Form, multiple Adverse Events (including Adverse Event term, grade, seriousness etc.) can be entered, each Adverse Event arranged as a group.

By default, the first group is being displayed. To *add* a group (e.g. Adverse Event, click 'INSERT ITEM' (**NB**: this doesn't clearly stand out as a button):

| | |
|---|--------------------------------------|
| System Organ Class | General disorders and administration |
| Adverse Event term (please use CTCAE term) | Pain |
| CTCAE grade | 2 |
| SAE | no |
| Date onset | [dd/mm/yyyy] 14/04/2015 |
| Insert item | |

MANUAL

ALEA Instructions for Local Data Managers

ID: HDC-OP-CDM-342-2-MN- 2

KMS
Version:

3

To *remove* a group, hoover the mouse over the to-be-removed group until the  icon appears at the left margin. By clicking this icon and selecting 'Delete section' one can delete the respective group:

7.3 Discrepancies

Some items are marked with red dotted lines and an associated value discrepancy in the Audit trail and discrepancies menu  in the right panel. These include required items which cannot be left blank, and entered values that do not meet certain pre-set criteria or checks (e.g. a date in the future).

The screenshot shows the 'Adverse Events' form on the left and the 'Audit trail and discrepancies' menu on the right. The form has fields for AE number, System Organ Class, Adverse event term, CTCAE grade, SAE, Relationship to protocol treatment, Date start, and Outcome. The 'Date start' field is highlighted with a red dotted line and a red arrow points to it. The 'Audit trail and discrepancies' menu has tabs for 'Current data item', 'All data items', 'Audittrail log', and 'Notes to file'. The 'Current data item' tab is selected, showing a list of items with 'value discrepancy' messages. The 'Date start (DSTART)' item is highlighted with a red dotted line and a red arrow points to it.

At the top of the Audit trail and discrepancies menu in the right panel you can select the tab 'Current data item' to see the value discrepancy of the item that is currently selected in the Form, or the tab 'All data items' to see discrepancies for all items of the Form.

Clicking the  icon marks the item to which the discrepancy applies with a blue border.

MANUAL

ALEA Instructions for Local Data Managers

ID: HDC-OP-CDM-342-2-MN- 2

KMS
Version:

3

Always try to address the discrepancy by entering / correcting the respective value in the Form. After providing an answer that does not lead to any other discrepancies, the red dotted line and the discrepancy will disappear.

However, if a value is truly missing or does not meet the pre-set criteria / check, a reason should be provided to override the discrepancy. Click the 'resolve' button and select a default reason from the dropdown list, or choose 'other' (which should be further specified). The options 'As CRF' is to be used when copying a value from a paper CRF. The option 'Value correctly entered' is to be used when the entered value is correct even though out of range.

NB: Addressing a discrepancy via the Resolve button will lead to a query that needs to be reviewed by CDM and should therefore be avoided as much as possible.

The screenshot displays the ALEA system interface. On the left is a patient form titled 'Instructions: Please complete this form before treatment start'. It includes sections for 'PATIENT CHARACTERISTICS AT ENROLMENT' (Weight, Height, Date of first diagnosis colorectal carcinoma, etc.) and 'MEDICAL HISTORY' (Cardiovascular disease, Pulmonary disease, etc.). A red arrow points to the 'Date of first diagnosis colorectal carcinoma' field, which is highlighted with a red dotted border. On the right is the 'Audittrail and discrepancies' window. It shows a list of data items, with the 'Date of first diagnosis colorectal carcinoma (histological) (DDIAGPCC)' item selected. Below this, a 'value discrepancy' is shown: '- Value is missing. Please provide.' A 'resolve' button is visible next to the discrepancy. A callout window titled 'Resolve audittrail issue' is open, showing a dropdown menu for 'reason' with options: 'Corrected value', 'Unknown at this moment', 'Value is correctly entered', 'As CRF', 'Not done', 'Not applicable', and 'Other'.

Once you answer a discrepancy the color changes to orange (i.e. reason is proposed). A discrepancy can either be closed by the CDM when the reason is accepted, or be reraised when the proposed reason is declined. Reraised discrepancies (colored red) should be re-addressed by the LDM, until accepted by the CDM.

7.4 Annotations

Annotations are like yellow post-it remarks / sticky notes on the CRF. Creating one works similar to creating queries. The LDM can create annotations, which should be checked by the CDM.

In the patient dossier in each form, you have the possibility to create an annotation on a data item level, form lever or patient level.

Annotations are not used in the analysis of the data and are not a part of the data export for statistical purposes.

Annotations

All Current data item Current Form Current Patient

data item annotation - Concomitant disease:(CONDIS)
att: everyone
this is a test annotation for everyone
by hdcict@erasmusmc.nl at 23-04-2014 12:23:41

When creating an annotation you can choose to either make one for yourself (private), for the same role (for instance so that other CDM can see them too – preferred option), or to everyone (now also the LDM and Site PI can see the annotation. Once an annotation has been created you cannot remove it anymore.

MANUAL

ALEA Instructions for Local Data Managers

ID: HDC-OP-CDM-342-2-MN- 2

KMS
Version:

3

7.5 Saving and submitting

After entering all data, you can save the form by clicking the Save button.

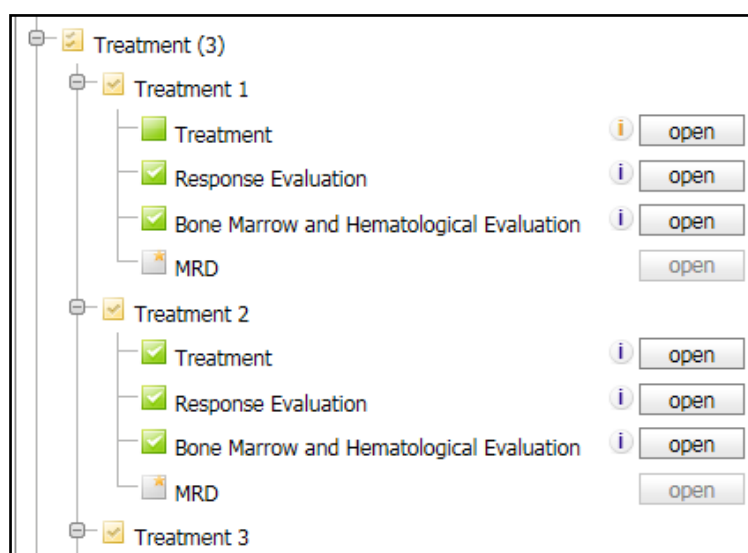

The Submit button will be enabled when all required items are entered and all discrepancies – if any – have been addressed. Only submit a Form if you think all data are correct and complete and no further data editing is expected.

NB: Eventually all Forms need to be submitted before data review by the CDM is possible. Moreover, cross-form checks only work once the applicable Forms are submitted.

7.6 Repeated events

Some Events are repeating events (e.g. Treatment). Add a new event by clicking the Add button in the Tree panel, and click OK to confirm.

A new event is added to the tree and will open. Add Events if applicable or when needed and enter data in chronological order.

7.7 Repeated Forms

Some Forms are repeating forms (e.g. Follow Up). Add a new form by clicking the Add form button in the Tree panel, and click OK to confirm.

MANUAL

ALEA Instructions for Local Data Managers

| | | | |
|-----|------------------------|-----------------|---|
| ID: | HDC-OP-CDM-342-2-MN- 2 | KMS Version: | 3 |
|-----|------------------------|-----------------|---|

A new form is added to the tree and will open. Add Forms when needed and enter data in chronological order.

7.8 Tips and Tricks

- Using the tab key to move to the next item is faster and more efficient than using the mouse.
- With shift + tab you navigate to the previous item.
- The icon  indicates a dropdown list, from which you can select the desired option. You can also type the first letter of the applicable answer option (e.g. y for yes)
- Dates can be picked through the date picker  or entered manually. Be aware that when using the date picker and clicking the double arrows to the left or right (<< and >>) one jumps a year back and forth. When using the single arrow (< and >), one jumps a month back and forth respectively. When entered manually, it is not necessary to type separators (i.e. / or -). For example, if one enters 01012015 ALEA recognizes this as a date and transforms it into 01/01/2015. If the date is today, you can enter "t" and the date of today will be displayed.

NB: For instructions on how to fill out the eCRF, see the study specific CRF guidelines.

KMS
Version:

3

8. Query management

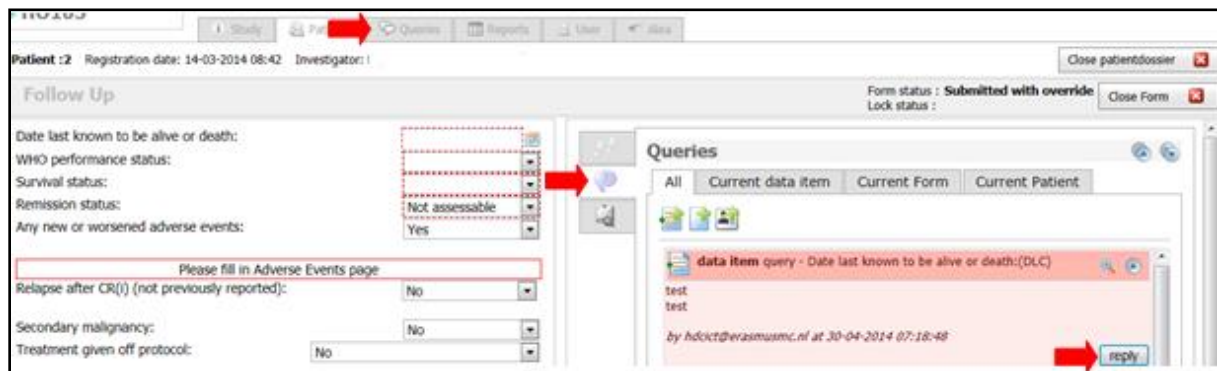

Checks are raised automatically (discrepancies). In contrast, queries can be raised manually by the CDM. Queries can relate to a specific data item, to a specific form or to a patient. All discrepancies and queries should be addressed by the LDM. Once you replied, the CDM can take action.

A typically query flow is depicted below:

Please note that even though the status of the query remains “Replied”, the CDM can have reraised the query, so always look at the color of the query: red means that there is still an answer required from the LDM.

You can either reply to queries in the Queries menu  of the right panel in the patient dossier, or through the main Queries tab .

In the Query overview (after clicking the Query tab) you can sort by:

- status (all queries, open queries , replied queries , reraised queries , closed queries ) ,
- type (all type queries, data item query, form query, patient query),
- Sr (= sources) (all sources, manual queries, SDV (Source Data Verification) queries, form discrepancies, form missing data).
- Patient i.d.
- Patient
- Query by
- Last update

Version:

3

In the Query grid you can also easily customize your sorting by dragging the selected column header(s) to the upper bar (reading 'Drag a column header here to group by column'), similar to what was described in chapter 4 regarding the Patient Overview. Settings can be saved via the Layout button → save current layout.

To view the CRF-item to which the query applies you can navigate to Dossier (to go to the patient dossier), Form+Dossier (to go directly to the specific form in the patient dossier), or Form only.

9. User

The tab User displays your User Profile, containing information about the role that has been assigned to you (e.g. Local Data Manager) and the settings that are in place. Via Application user settings you can reset the layouts that were previously created to the default versions.

| study | study status | role | account status |
|-------|--------------|----------------------|----------------|
| HO132 | OPEN | Local data manager * | Activated |

10. Alea

The last tab contains information about ALEA. This section is not applicable to you.

11. Summary

Please adhere to the following flow for data management:

- Fill out the Forms in chronological order at all times, to prevent unnecessary discrepancies.
- Resolve discrepancies preferably by providing the correct data in the Form. Only if the correct data has already been entered, answer the discrepancy by clicking on the Resolve button.
- Submit the Forms as soon as possible (which enables CDM to check the data), but not before the data is complete and no further data editing is expected.
- Reply to queries (either in the patient dossier (right panel) or via the query tab). All red queries need to be addressed. (Orange queries need to be handled by CDM). In the end, all queries should be green = closed.
- Once a Form is checked by CDM and no open queries remain, the CDM can lock the Form, which will automatically prevent the Form for further data-entry/editing.
- Once all Forms are locked, the data management for that patient is done.

Appendix B: Field Chooser box options

| Field | Description ¹ |
|---|---|
| #A | Total number of data item annotations |
| #A-F | Total number of form level annotations |
| #A-P | Total number of patient level annotations |
| #FQ-C | Number of closed queries on Forms |
| #FQ-O | Number of open queries on Forms; Open initial, form level, queries |
| #FQ-R | Number of non-closed queries on Forms: Open form level queries with replies |
|  #L | Total number of locked forms |
| #PQ-C | Number of closed queries on Patient |
| #PQ-O | Number of open queries on Patient |
| #PQ-R | Number of non-closed queries on Patient |
|  #S | Number of submitted forms (without discrepancies and without missing values) |
|  #Sa | Number of saved forms |
|  #Sd | Number of submitted forms with discrepancies |
|  #Sm | Number of submitted forms with missing values |
| #TF | Total number of forms |
| #TQ-C | Combination of all closed patient- and form level queries |
| #TQ-O | Number of open queries on Patients and Forms; Combination of all open patient- and form level queries |
| #TQ-R | Number of non-closed queries on Patients and Forms; Combination of all non-closed patient- and form level queries |
|  | Number of verified Forms |
|  | Clinician and Institute code; Combination of institutes and all investigators per institute |
|  | Study name: Could be useful when making an export of the patient overview. |

¹ All numbers are displayed *per patient*
